First supplement to the list of  
THE LOWER FUNGI OF THE PHILIPPINE ISLANDS

by

C. F. Baker

(*College of Agriculture, Los Baños, P. I.*)

---

The publication of the Preliminary List of the Lower Fungi of the Philippine Islands in Leaflets of Philippine Botany, Vol. VI, pages 2065 to 2190, immediately called forth from various friends of this work, many corrections, additions, bibliographical citations and taxonomic suggestions. At the same time the studies of Philippine material by *Sydow*, *Rehm*, *Saccardo*, and others in Europe, were being rapidly continued and published. The European war having caused a temporary discontinuance of new work, this becomes an opportune time to bring all further contributions together, down to date.

The field work of two of my student assistants, *S. A. Reyes*, and *M. B. Raimundo*, has become increasingly fruitful and important. They are only able to give odd moments to it, but even with this, their most unusual powers of observation have produced great results. I have never known of anything better among American students. I have also received very valuable assistance from others of my students, notably from *J. J. Mirasol*, *G. Evaristo*, *N. G. Teodoro*, and *E. Sablan*, all as effective as I should expect from the average American Agricultural College student under similar circumstances.

The Philippine Government should certainly soon recognize the high importance of laying the foundations here for work in Plant Pathology. In the United States and in most of the English colonies, the crucial importance of this work has long been recognized. These Islands have already had one great agricultural industry wiped out by a fungous disease, another seriously crippled, and losses from these causes are constantly occurring in various current crops. In the face of this there is no official Plant Pathologist in the Islands. As I have frequently stated elsewhere, this line of work, together with Economic Entomology, forms the very highest order of agricultural insurance. With the help of *Reyes* and *Raimundo*, I have every week become acquainted with new plant diseases, many never recognized in these Islands before, many entirely new to Science, and many of very serious economic importance. We must have a thorough technical knowledge of all these things as rapidly as we can get it, if we are to build up a sound agricultural practice in these Islands. When our much needed Plant Pathologist comes, he will find the ground broken over a field of unsurpassed opportunities, and we shall be able, very fortunately, to furnish him with first class assistants from among our graduates.

Even while awaiting permanent organization of the work, we might be able to accomplish a great deal of value, had we any laboratory or laboratory equipment. What we have accomplished has depended to a very large extent on night work and personal expense. Reference to the small mycological library possessed by the government necessitates a trip to Manila, which we can rarely accomplish. These conditions must explain why the work has not developed more rapidly, and must absolve us from any suspicion of not having clearly recognized the fundamental importance of this work to the development of Philippine Agriculture and Philippine Science.

Again I have to acknowledge the kindly helpfulness of *Dr. Copeland*, *Dr. Foxworthy*, and *Mr. Merrill*, and especially *Mr. Elmer*—who has accomplished such a colossal work in Philippine Botany through private enterprise, and who has borne the entire burden of the publication of these papers.

The present supplement lists 320 additions to the known Philippine Lower Fungi, and this brings the entire list up to 958. The additions are starred in the following enumeration.

Corrections and additions, especially in the bibliography, as also synonymical and taxonomical indications, are most earnestly solicited.

## UREDINALES

### PUCCINIACEAE

#### ***Aecidium banosense* Syd.**

- 1913 *Sydow*, Ann. Myc. IX—Los Baños, on a *Vernonia* (Baker, 1553)

#### ***Aecidium blumeae* Henn.**

- 1912 *Saccardo et Trotter*, Syll. Fung. XXI, 767  
1914 *Sydow*, Philip. Journ. Sci. IX, C, 159—Taytay, Palawan, on *Blumea balsamifera* (Merrill, 8740)

Exsiccatus: *Sydow*, Fung. exot. no. 23—Malasugat, Mindanao, on *Blumea balsamifera* (Merrill)

#### ***Aecidium clerodendri* Henn.**

- 1908 *Hennings*, Philip. Journ. Sci. III, C, 43—San Isidro, Prov. Nueva Ecija, on *Clerodendron calamatosum* (Merrill, 4198)  
1914 *Sydow*, Ann. Myc. XII, 111

#### ***Aecidium kaernbachii* Henn.**

- 1912 *Sydow et Butler*, Ann. Myc. x, 273  
1914 *Sydow*, Ann. Myc. XII, 111—Formosa  
1914 *Baker*, Leaff. Philip. Bot. VI, 2068 (non *Puccinia convolvuli*, fide *Sydow* in later letter); 2071 (*Sydow* reference under *Puccinia convolvuli* goes to *Aecidium kaernbachii*, dropping *Puccinia convolvuli* from the list)

Exsiccatus: *Sydow*, Fung. exot. nos. 25 and 26

**Aecidium machili Henn.**

1914 *Sydow*, Ann. Myc. XII, 111—Formosa

**Aecidium nummulare Berk.**

1875 *Berkeley*, Journ. Linn. Soc. XIV, 95—Ceylon, on  
*Ceropegia candelabra*

1888 *DeToni*, Sacc. Syll. Fung. VII, 809

**Aecidium paederiae Diet.**

1912 *Sydow et Butler*, Ann. Myc. X, 273

1914 *Sydow*, Ann. Myc. XII, 111—Formosa

**\* Aecidium parile Syd.**

1914 *Sydow*, Ann. Myc. XII, 197—Mt. Maquiling, on  
*Goniiothalamus elmeri* (*Baker*, 2802)

This species does not occur on a *Loranthus* as indicated in the original description, but produces on the *Goniiothalamus* a remarkable *Loranthus*-like hexenbesen.

**Aecidium phyllanthinum Syd.**

1907 *Sydow et Butler*, Ann. Myc. V, 505—India, on  
*Phyllanthus reticulatus*

1912 *Saccardo et Trotter*, Syll. Fung. XXI, 780

**Aecidium plucheae Henn.**

1908 *Hennings*, Philip. Journ. Sci. III, C, 44—Iloilo, on  
*Pluchea indica* (*Copeland*, 88 and 89)

1912 *Saccardo et Trotter*, Syll. Fung. XXI, 766

**\* Aecidium rhytismoideum Berk. et Brm.**

1914 *Sydow*, Philip. Journ. Sci. IX, C, 159—Lake Mangao, Palawan, on *Diospyros discolor* (*Merrill*, 8969); Mt. Capoas, Palawan, on a *Diospyros* (*Merrill*, 9093)

**Aecidium torae Henn.**

1904 *Hennings*, Engl. Bot. Jahrb. XXXIV, 42

1905 *Siccardo*, Syll. Fung. XVII, 427

Exsiccat: *Sydow*, Fung. exot. no. 72—Basagan River,  
Mindanao, on *Cassia tora* (Merrill)

***Aecidium uvariae-rufae* Henn.**

1912 *Saccardo et Trotter*, Syll. Fung. XXI, 754

***Hamaspora acutissima* Syd.**

1914 *Sydow*, Ann. Myc. XII, 108—Formosa

***Hemileia vastatrix* Berk. et Brm.**

Prov. Benguet, on inflorescence of *Polygonum chinense* (*Mearns*). This form was sent to *Mr. Petch* by *Mr. Merrill* and the following is the very interesting note from *Petch* on the Philippine specimen: "It is undoubtedly *Ustilago treubii* *Solms* although I have not seen this particular form of the gall in Ceylon and it is not figured by *Solms*. *Massee*, Text Book of Plant Diseases 1899, 216 says that *Ustilago treubii* *Solms* is the same as *Ustilago emodensis* *Berk.* He has probably seen the type of the latter and may be right, but the identification is certainly not warranted by *Berkeley's* description as quoted in *Saccardo*.

..... On the whole I think that *Massee* is right and that the species should be called *Ustilago emodensis* Berk.

This is undoubtedly the same fungus as that referred to under the name of *Cercospora personata* and it would appear to be more naturally considered a *Septogloeum* than a *Cercospora*. It is one of many fungi whose characters lend themselves readily to a very wide range of opinionative interpretation. However, before this reference is finally made Javan material should be thoroughly studied
